

The Health Benefits of Sodium

Dr. Peter Vessers, MD

Sodium helps with water balance in the body. It helps to pump water into cells. Because sodium is tied so closely to water in our bodies it is very important. When we sweat we lose a lot of sodium so it is especially important to have a regular intake of it in hot environments. Modern table salt is a common modern source of sodium which is why your sweat and tears taste salty. Halite is nature's best source of sodium. Put simply, without enough of it in your diet you will die.

A lack of sodium can lead to:

Vomiting

Headache

Weakness

Low blood pressure

Confusion

Dizziness

Muscular irritability

Death

HALITE

The Flavor Enhancer™

www.halite4flavor.af

**Makes your food taste better,
almost like magic!**

- Cookies taste sweeter!
- French Fries taste saltier!
- Try it on vegetables!
- Use it to make ice cream!

Discovered deep in caves in the deserts of Northern Africa, halite is a mineral that seems almost magical in all it can do. It can make almost any food taste better – from sweet to salty. With just a pinch of halite added you'll be amazed at the new tastes you'll discover. That's why we call it The Flavor Enhancer™.

Halite also has the incredible ability to make food last longer! Just rub it into your freshly cut beef and it will stay fresh and ready to eat for weeks. You won't even need to freeze it!

Halite is all-natural and comes directly from the Earth. It has no extra chemical or preservatives.

Don't miss your chance – order now!

Edible Gold Flakes

Eat Elegance™

When you truly want to eat elegance try our new edible gold flakes. Each shaker comes packaged in a solid glass cube for greater elegance. Great for special occasions like weddings, anniversaries and birthdays or just to show that special someone you treasure them. The flakes are completely flavorless and are completely harmless to eat (unless you eat too much). Make your meal sparkle with Edible Gold Flakes from Epicurean.

Sprinkled in ice cream...

As a topping on pizza...

Mixed with your favorite drink...

Eat Elegance™

GOLD AROUND THE WORLD

In 1848 the California "Gold Rush" occurred leading over 300,000

Gold is gold, even in mud.
-Hungarian Proverb

A good name is better than gold."
-African Proverb

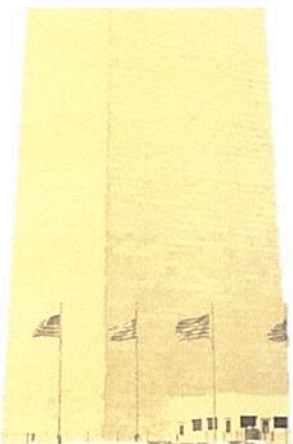

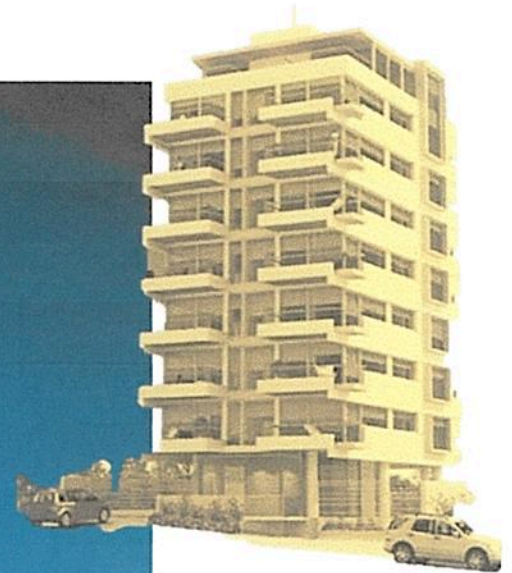

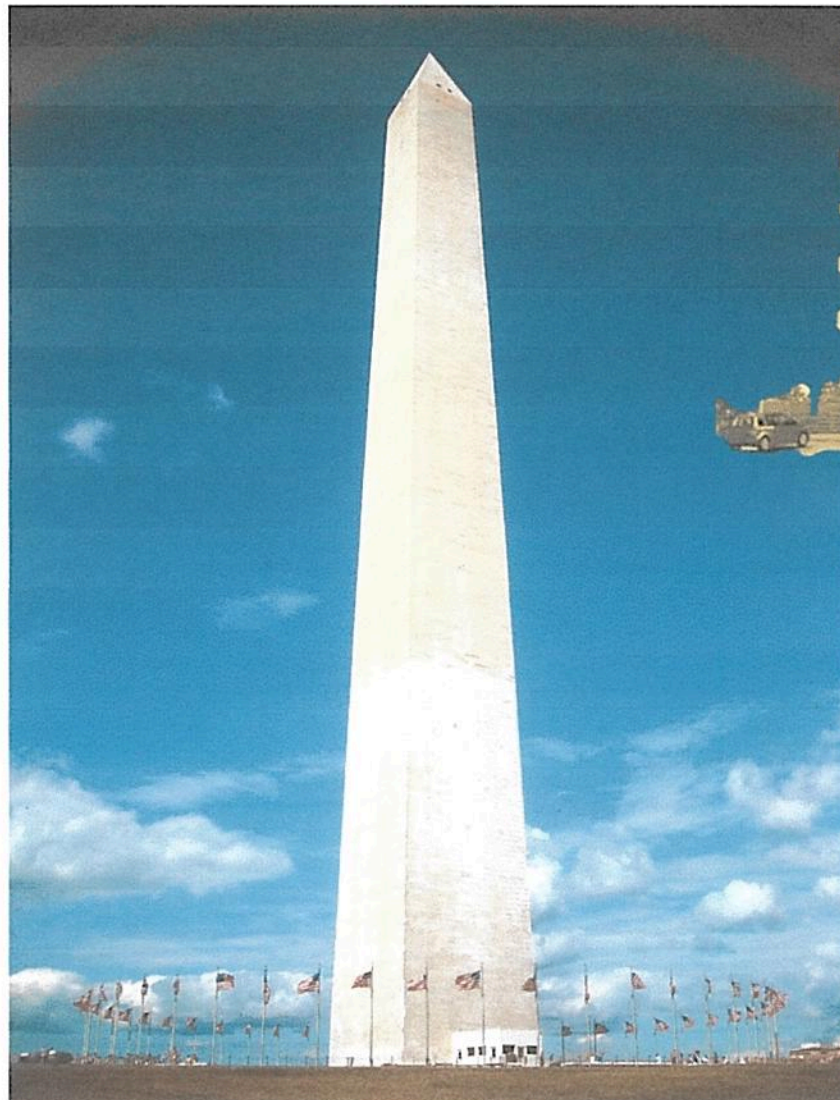

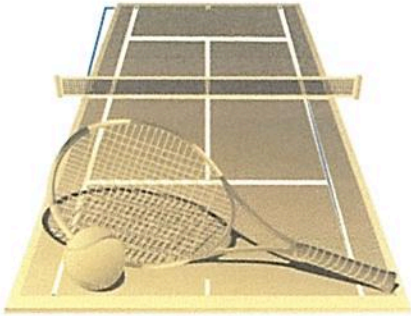

I love God's commandments above gold, above fine gold.
119:127
-Proverbs

Over 5,000 years ago the Egyptians began smelting gold later creating the amazing burial mask of Tutankhamun.

The Inca people of South America made statues of their sun god Inti of gold because it shines like the sun.

If you took all of the gold that has been found and mused it into a cube it would be:

- about the size of a small office building.
- only 1/3rd the height of the Washington monument!
- less than the size of a tennis court.

**WANGARAN
DEATHBLADE**

VS.

**ARABIAN
SCIMITAR**

Using high-powered computer software our scientists have simulated 1,000 battles between a Wangaran and Arabian warrior. According to the simulation the Arabian warrior would win over 97% of the time (972 battles out of 1000.) This is incredible. We've never had any battles with so high a percentage. The simulation data showed that the golden Wangaran deathblade simply had no chance against a steel scimitar.

Gold's value is based in part on how rare it is. You may think with all the wedding rings and coins in the world there would be a lot of gold available. Think again! Look at this poster to get an idea of how rare this mineral really is.

ARABIAN SCIMITAR

Intimidation: 5

Stability: 7

Durability: 9

Slashing: 10

Stabbing: 6

TOTAL: 7.4

Scimitars have been used by many warriors throughout history but the Arabians are famous for popularizing them. The curved blade easily slashes through cloth or leather armor. While not particularly intimidating to see due to its thin size and common appearance, the weapon remains greatly feared by opponents who understand the power of a steel blade. Against any other metal weapon the scimitar is likely to come out victorious.

WANGARAN DEATHBLADE

Intimidation: 9

Stability: 8

Durability: 1

Slashing: 2

Stabbing: 4

TOTAL: 4.8

The Wangaran Deathblade is a unique weapon. An enemy with the riches to make swords out of the rare and valuable metal would surely terrify their opponents. And since gold does not rust when wet and is not worn down by sand, this golden blade is very durable in harsh weather.

Unfortunately, when actually used in battle, the weight and softness of gold make it a terribly ineffective material. Gold is extremely heavy so the sword is hard to swing controllably. Gold is also so soft that if a Wangaran Deathblade strikes an enemy's shield or sword the gold will easily bend, lose its sharp edge, and leaving the Wangaran warrior completely defenseless.

Usefulness

One part of a mineral's value is what you can make with it. Due to the high value of gold and the unknown value of Halite we are not going to let you just play around with it. Instead we have provided two objects that function similarly to them. Gold, when flattened, bends and molds much like aluminum foil. Halite, in its natural form, is like a brittle rock.
